Mavtrek
get to the point of work

With over three decades in the private sector revitalizing struggling businesses to profitability, Chris Brockway is recognized for his dedication to lean principles and enhancing customer and employee experiences with his innovative software solutions.

CHRIS BROCKWAY, Chief Operating Officer

Chris Brockway is the Chief Operating Officer at Mavtrek. With an extensive track record in the private sector spanning over three decades, Chris has spent much of his career elevating employee and customer experiences through innovative software solutions. His extensive background in engineering and commitment to lean principles uniquely position him for serving the needs of the public sector by applying his insights into the customer journey with effectiveness, precision, and finesse.

Chris's journey to COO at Hornet Capital LLC began with his role as Chief Technology Officer and partner, identifying critical opportunities for revitalization within the firm's portfolio of small to mid-sized manufacturing companies. He led the transformation of their proprietary ERP system into an online SAAS application, directly addressing issues of inadequate information systems and failed ERP implementations that plagued many of Hornet's acquisitions. This strategic move not only facilitated the turnaround of Hornet's diverse manufacturing portfolio but also empowered these businesses with comprehensive tools for seamless operation across purchasing, manufacturing, and customer service.

In addition to his technical leadership, Chris took on multiple executive roles, including President and VP of Manufacturing, where his hands-on approach and keen insight into process refinement significantly enhanced team management and product development. Through Chris's leadership and innovations, he not only propelled Hornet Capital's operational capabilities but also laid a solid foundation for sustainable growth and success.

Before Hornet Capital, Chris worked at G-Bar Limited Partnership as a member of a team building the Option industry's first real-time automated trading system. Additionally, his consultancy work for clients such as Abbott Laboratories, GE Capital, and Montgomery Wards underscore his prowess in developing tailored software solutions for multifaceted systems and requirements.

Chris earned his Bachelor of Science degree in Computer Engineering from the University of Michigan. During his career Chris earned various certifications related to lean manufacturing including a 6-sigma Green Belt.

Mavtrek, based in Greensboro, NC, builds modern software products and solutions focused on the people and at the places where management and maintenance of public infrastructure is being done. We were founded in 2019 to be both the crucible and the forge where new systems for managing public infrastructure are being fashioned. We are revolutionizing the industry by getting straight to the point of work.

Mavtrek point-of-work software solutions run the way you want them to by creating environments where success is achievable at every point in your working process. Our software was born in the passenger seat of a crew truck so our solutions are built around the way you work, not the way someone from Silicon Valley thinks you should. The fact is you know the best way to do your work. We build the software to help you do just that.
